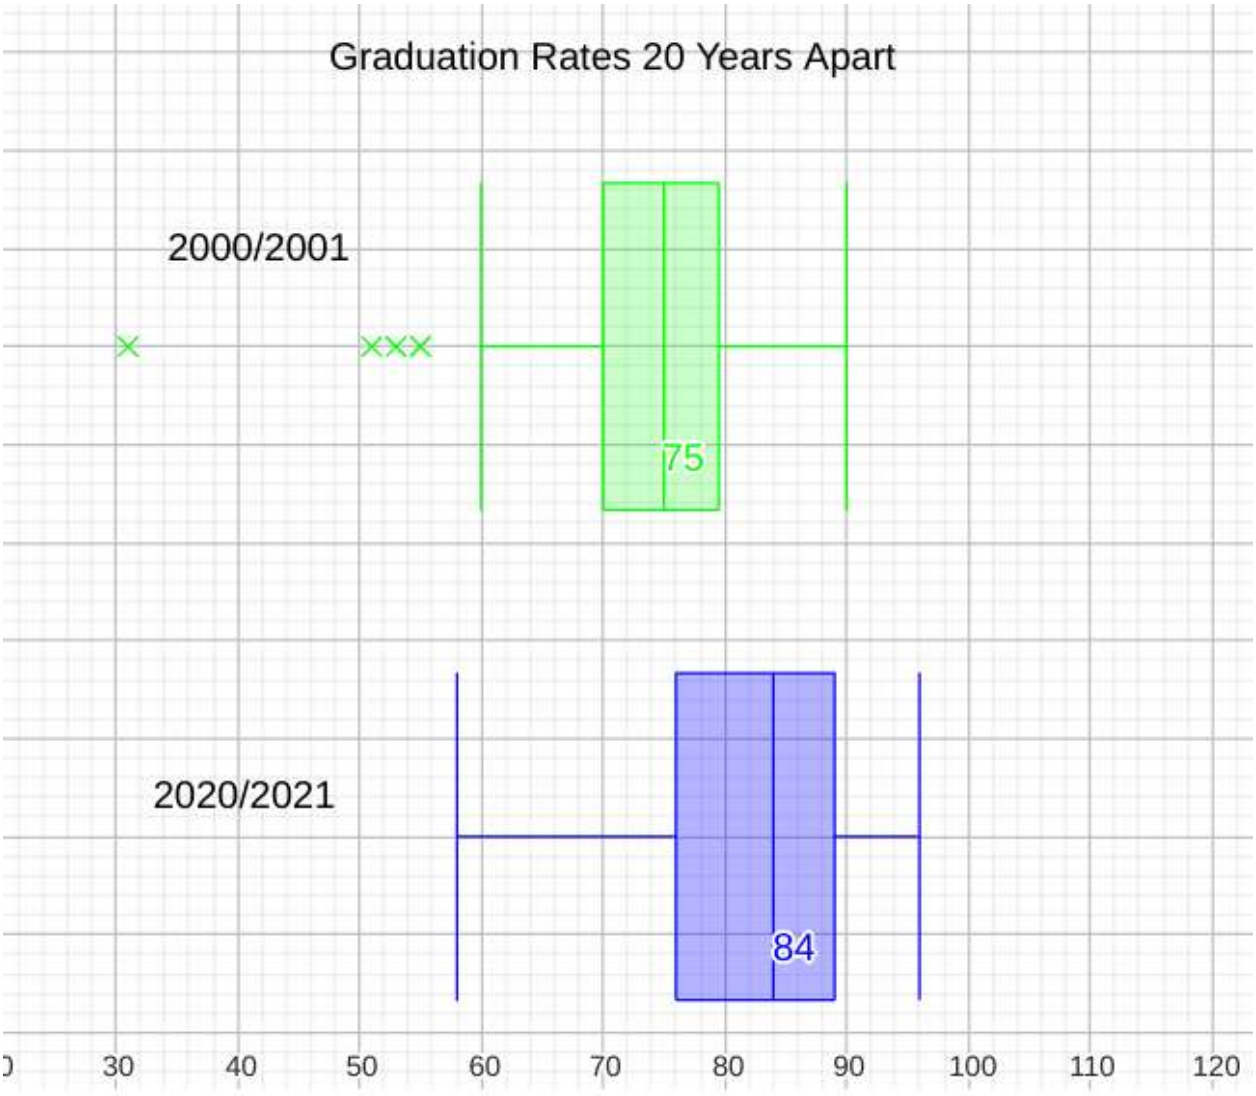
Did graduation rates improve 20 years apart?



The outlier from the green diagram is Sitkine. In 2000/2001 Sitkine had a graduation rate of 31% however I cannot compare because in 2020/2021 the results were masked. Although I couldn't show Sitkine. Haida Gwaii was another outlier with a graduation rate of 53% in 2000/2001. But in 2020/2021 Haida Gwaii's graduation rate went up to 89%.

My district's graduation rate went from 69% in 2000/2001 to 84% in 2020/2021.

Comparing the two graphs we can see that on average the graduation rate is around 10% higher than it was 20 years ago.
